

Maarten van Dijk

Managing Director, SkyNRG

“Replacing fossil jet fuels with sustainable aviation fuels is what we aim for. In 2010, we set out to help make a market for Sustainable Aviation Fuel. Since then, the industry has made some great steps and during these last ten years SkyNRG has always been at the forefront of these developments. We have built our company on strong partnerships, pioneering the first SAF supply chains on all continents and now moving into production capacity. Because for this new industry to mature, it is essential to start scaling SAF production capacity rapidly. And that can only be done by effective collaboration between all relevant stakeholders on the one hand and the establishment of the right long term, stable policy frameworks on the other. We are proud to be part of the Berlin Aviation Summit and I am happy to share my knowledge and insights on SAF”

Maarten is managing director of SkyNRG and has been with the company since the start. He is the company’s representative on its Independent Sustainability Board and holds various seats in industry and government advisory platforms. He studied chemistry at Utrecht University, where he graduated with majors in renewable energy technologies and in business economics.

SkyNRG is a global market leader for sustainable aviation fuel (SAF) solutions. Having supplied over 30 airlines on all continents, it is our mission to make SAF the new global standard. SkyNRG sources, blends and distributes SAF, guarantees sustainability throughout the supply chain and helps to co-fund any price gap over conventional jet fuel. At the same time, SkyNRG focuses on developing regional SAF supply chains -e.g., our own dedicated SAF production plant, [DSL-01](#), that offer a real sustainable and affordable alternative to fossil fuels. To ensure we make the right decisions regarding the sustainability of our operations, projects and products, SkyNRG is structurally advised by an [independent Sustainability Board](#), which includes representatives from WWF International, the European Climate Foundation, Solidaridad Network and the University of Groningen. Also, SkyNRG’s operations are certified by the [Roundtable on Sustainable Biomaterials \(RSB\)](#), the highest possible certification standard for sustainable fuels. www.skynrg.com
